Electrical Engineering student seeking a Summer 2027 internship at the intersection of hardware and software.

Education

Purdue University — West Lafayette, IN
Bachelor of Science in Electrical Engineering — *Class of 2027*

Oakland Community College — Royal Oak, MI
Coursework: Object-Oriented Programming in C++, Intro to Linux/Unix Administration — *Summer 2021 & 2022*

Experience

Research & Development Intern — Summer 2026
Comau (Industrial Automation & Robotics) — *Southfield, MI*

- Conducted root-cause failure analysis on Plasma Transferred Wire Arc (PTWA) thermal spray torches to diagnose failure modes and improve hardware reliability.
- Engineered internal software solutions for remanufacturing and finance workflows, cutting data collection time by ∼60% and quote generation turnaround by 70%.
- Formulated a remanufacturing framework to reduce turnaround times, elevate product quality, boost profit margins, and support process scalability.

Software Engineer Intern — Summer 2025
Valeo (Automotive Equipment) — *Troy, MI*

- Developed an Nvidia DriveWorks plugin for Valeo's custom LiDAR hardware, enabling autonomous driving capabilities on Nvidia platforms.
- Built a cross-platform state-flow application in Python, fully compatible with MathWorks Stateflow.
- Implemented critical automation, features, and bug fixes across multiple internal applications.

Teardown Intern — Summer 2022
Munro & Associates (Engineering Consulting) — *Auburn Hills, MI*

- Performed teardowns of a Tesla Model Y and Rivian R1T to evaluate design, cost, materials, and manufacturing processes of individual components.

Research & Development Lead — Spring 2025 – Present
Purdue Hackers — *West Lafayette, IN*

- Organise technical workshops and community events for one of Purdue's largest student organisations.
- Lead a project to archive and preserve the organisation's technical data.

Projects

3D-Printed Underwater Drone | *CAD, Embedded Systems* — In Progress

- Designing a 3D-printed underwater ROV, developing hydrodynamic hull geometry, dynamic seals, and pressure-resistant enclosures.
- Architecting embedded control systems, including brushless thruster ESC integration, depth/IMU sensor telemetry, and tether communication.

Shisho | *Python, AI* GitHub

- Engineered a personal AI assistant Discord bot supporting task reminders, dynamic iCal calendar generation, flashcard creation, and automated document printing.
- Implemented a self-hosted database backend to store notes and synchronize a live reading list directly with personal website.

Email to Print | *Python* GitHub

- Developed a self-hosted service that automatically prints files received via email or added to a database, with Discord bot integration.

Comfi Beats | *JavaScript, Node.js* GitHub

- Built and maintain a 24/7 music streaming bot for content creator LilyPichu (4M+ subscribers).

Skills

Languages: Python, C, C++, Java, JavaScript, MATLAB
Tools & Platforms: Linux, Proxmox, Git, Nvidia DriveWorks, Excel, Network & Server Administration
Spoken Languages: English (Native), French (Native), Japanese (Elementary)
